In this article we will show how the library in MusicReader works.

Library Folder

The library in MusicReader is a folder on your system containing:

- PDF files
- playlists
- library control file (library.xml)

In most cases this folder is called **SheetMusicPDF** and located in your **Documents** folder. The location of this folder can be found and changed in the settings of the application (tab "library").

Adding

Files to Library

There are two ways you can add files to the library:

You can add files directly to the library folder using Windows Explorer or Mac OS Finder. Simply go to the library folder and add files to it.

In most cases this folder is called SheetMusicPDF and located in your **Documents** folder.

If you can't find it there then check the settings of MusicReader for the correct location.

- Use the ADD buttons in the lower bar of the library:
 - (1) The one with the plus sign gives you a file selection dialog to select files to Add.
 - (2) On Windows there is also one to jump to the library folder.
